

October = Fire Prevention

October is Fire Prevention Month. There is no better time to check all your smoke and carbon monoxide detectors to ensure they're in perfect working order. Indeed, smoke detectors do not work because:

- they've reached the end of their useful lives,
- they need new batteries, or
- they have been taken down because of an inordinate amount of false alarms (particularly in kitchens).

Without a doubt, working smoke detectors do save lives. Choose from one of our smoke detectors or carbon monoxide alarms that fit your requirements best.

THE BASIC DETECTOR

Battery Operated

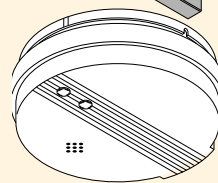

- Includes 9 volt battery
- For use in all rooms
- Easy to install
- Test button
- Low battery indicator
- UL Listed
- Model 440374

9⁸⁹

40050202
Reg. \$ 10.99

KIDDE

Battery Operated with Hush Button

- Includes 9 volt battery
- Ideal for kitchens
- Low battery indicator
- Easy to install
- Test button
- Low battery indicator
- UL Listed
- Model 440375

13⁴⁹

40050201
Reg. \$ 14.99

KIDDE

THE BEST OF ALL WORLDS!

120VAC Wire-in with Battery Backup & Hush Button

KIDDE

- 120VAC direct wire
- Protection during power outages
- Includes 9 volt battery
- Ideal for kitchens
- Single and/or multiple station
- Green AC power light
- Red alarm light
- UL Listed
- Model 12040

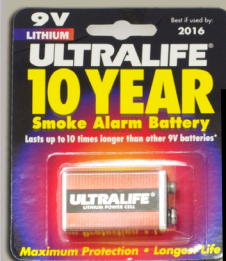

17⁴⁵

40050205

TIPS & TECHNIQUES

NEVER MIX THESE CLEANING PRODUCTS!

Hydrogen peroxide and vinegar. Combining these creates peracetic acid which is corrosive. It can also harm skin, eyes, throat, nose, and lungs.

Drain cleaner and more drain cleaner. It's tempting to pour more drain cleaner as you can but these could make for a dangerous situation. Combining different drain cleaners can cause an unexpected reaction which could release of chlorine gas and potentially lead to an explosion.

Bleach and ammonia. Combining these can release chloramine vapors, which can cause respiratory problems and throat burns if inhaled. A number of cleaning formulas have

bleach or ammonia in their ingredients so take extreme caution before attempting to mix them. It is better to err on the side of caution.

Bleach and rubbing alcohol. Combining these creates chloroform which could knock you out. High levels can lead to nervous system damage, as well as damage to eyes, lungs, skin, liver, kidneys, and even death.

Bleach and vinegar. Combining these can also release chloramine and chlorine vapors.
